DATA ANALYTICS | POWER BI | SQL | DATA MODELING | N8N | FABRIC

Professional Summary

Senior Data Analyst with extensive experience in Business Intelligence and data orchestration, focused on transforming complex data ecosystems into strategic analytical products. Proven track record in end-to-end solution architecture, ranging from orchestrating automated ETL pipelines (n8n, Python, SQL) to advanced modeling and executive-level data visualization (Power BI). Significant experience in the financial sector, specializing in system reconciliations, operational workflow optimization, and data governance/quality application development, driving business scalability.

Technical Skills

- **Data Analytics & BI:** Advanced Power BI (DAX, Power Query, HTML Content), Microsoft Fabric, Data Storytelling, Financial KPIs, Multidimensional Data Modeling
- **Data Engineering & Automation (ETL):** Automation pipeline architecture with n8n and Python, RESTful API integrations, Data Cleansing & Governance.
- **Databases & Integrations:** SQL Server, PostgreSQL, Oracle, Complex ERP & Core Banking integrations (TOTVS Protheus, Sinqia/Frontis, WebDox).
- **Product Development:** Dart, Flutter, JavaScript, HTML, Git; internal auditing application development.
- **Methodologies & Design:** Dashboard UX/UI, Figma, Agile (Scrum/Kanban), Notion.

Education

- **Postgraduate Degree in UX/UI Design** – EBAC (2025-2026)
- **Degree in Systems Analysis and Development** – Universidade Positivo (2023 - 2024)

Professional Experience

SENFF | Mid Level Data Analyst (Data Analytics & Automation) | 2025 – Presente

Technical leadership in building data ecosystems for high-complexity financial products. Direct responsibility for integrating relational database modeling, automation workflows, and tactical/executive (C-Level) business intelligence dashboards.

- Architecture and implementation of a robust portfolio of Power BI dashboards (C-Level and operational), ensuring real-time visibility for vital areas such as Insurance, Treasury, Accounting, KYC, and POS terminal financial viability, alongside leading massive FIDC data reconciliation between TOTVS and Sinqia systems.
- Design and development of ETL pipelines using n8n, Python, and SQL to automate the extraction, transformation, and daily delivery of accounting reports, data cleansing (smart removal of undue credit blacklistings), and end-to-end automated management of FIDC assignment terms integrated with the WebDox API, saving over 10 hours weekly.
- Development of internal tools using Flutter, integrated directly with databases for real-time monitoring and auditing of migration queues and FIDC daily value validation, minimizing false positives and ensuring operational transactional integrity.

ARTESA CONSTRUTORA | Administrative Assistant | 2019 - 2025

- Implemented strategies for cost reduction and efficiency gains.
- Developed financial reports in Java for decision-making.
- Acted in the implementation and integration of the ERP system (Mais Controle)
- Created dashboards and tables using React, C, and MySQL.
- Monitored economic indicators and presented data in strategic meetings.

CAIXA ECONÔMICA FEDERAL | Systems Support | 2017

- Automated administrative tasks using Python.
- Performed maintenance and improvements on internal systems using Java and C#.
- Provided technical support and managed documentation for personal and corporate accounts.

Certifications

- Power BI Fundamentals – Fundação Bradesco.
- LGPD for Public Management – SEBRAE
- The Importance of Internet Quality Analysis – AVAMEC
